

Weekly Work Report - CRM Cleanup Thingy

Date: July 11 By: Team

So, this week we did some stuff. There were meetings, but not everyone showed up. One of the developers pushed code to main without testing it. Some of the tickets were updated but some are still waiting. Not sure what happened in the planning meeting, if it even happened.

There was a call but we didn't take notes. Maybe the design was shared, maybe not. EPS wasn't mentioned at all in our syncs, so we'll have to check again next week. Also, CRD sounds familiar but nobody has mentioned it this week.

The client was told something last week. We think Priya sent an email or maybe scheduled a survey,

but there's no confirmation. No mention of CAF or SCN yet - that's usually done at the end, right?

One of the engineers raised something in Slack about risks but we didn't add it to the tracker.

There's no formal log of issues, but people know what's broken.

There was no kickoff because the client said they were busy. Also, no resource planning - we're just using whoever is free. The document with the high-level plan got overwritten during a system sync.

Stuff To Maybe Do: - Send a survey? - Talk to infra? - Make a Gantt thingy? - Tell someone about

issues?

That's it for now.
